

Spring MVC Architecture

Spring MVC ?? --> Actual Web Framework

spring_webmvc --> Spring MVC

-- Rest API

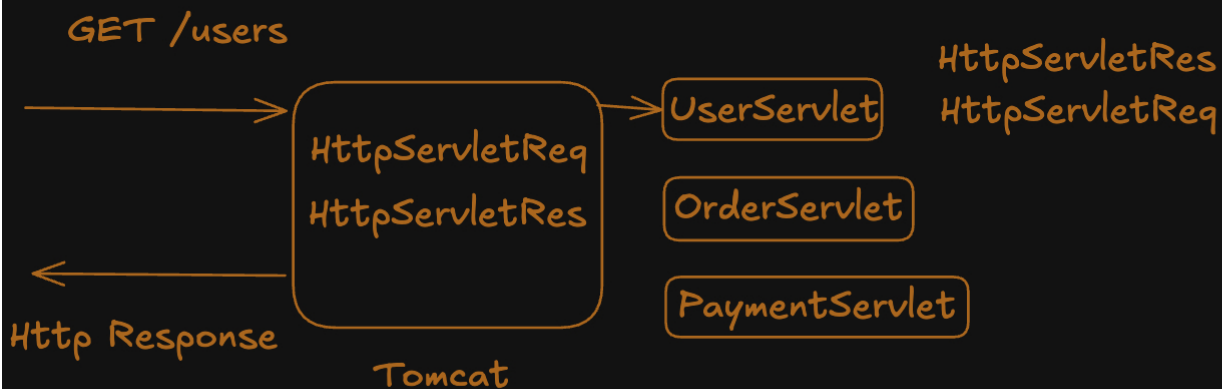

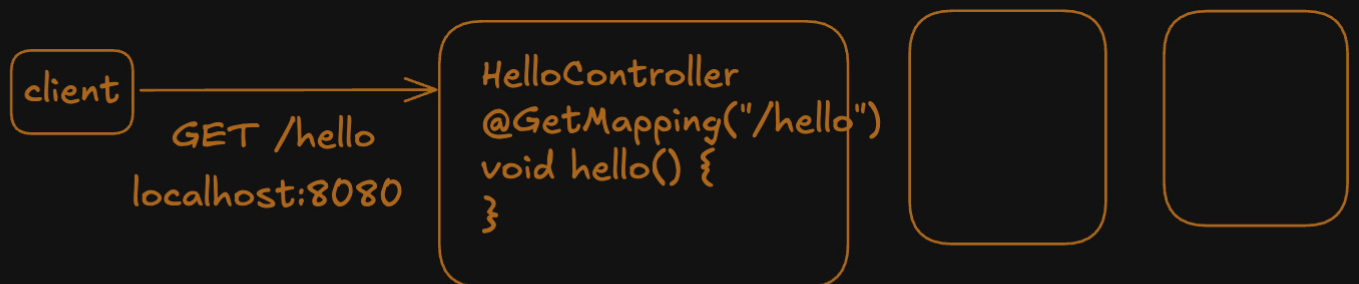

-- Web App (HTML / JSP)

@Controller

@RestController

@PostMapping

Spring Boot ?? --> Auto Configuration

Servlet :
Request parameter checking
JSON to Java objects
Response creation
Exception Handling

POST /users

```
{  
}
```

/users

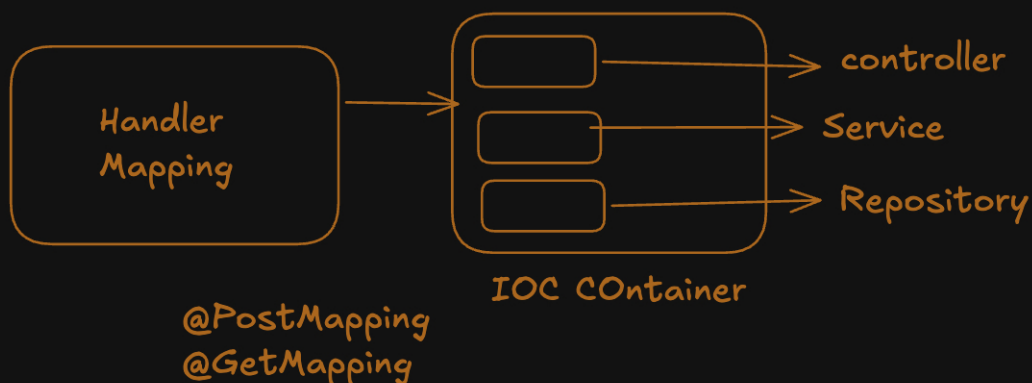

```
createUser(@RequestBody  
User user) {}
```

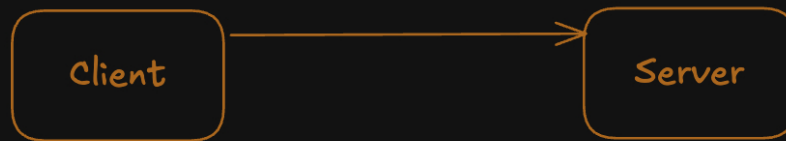

HandlerMapping

GET /student --> StudentController.getAllStudents()

POST /student --> StudentController.createStudent()

Request Body

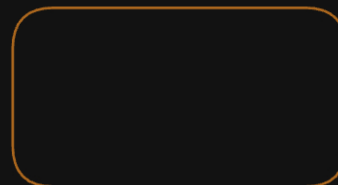

Path Variable (/users/1)

Query Parameter (/users?id=1) --> tomcat

HandlerMethodArgumentResolver

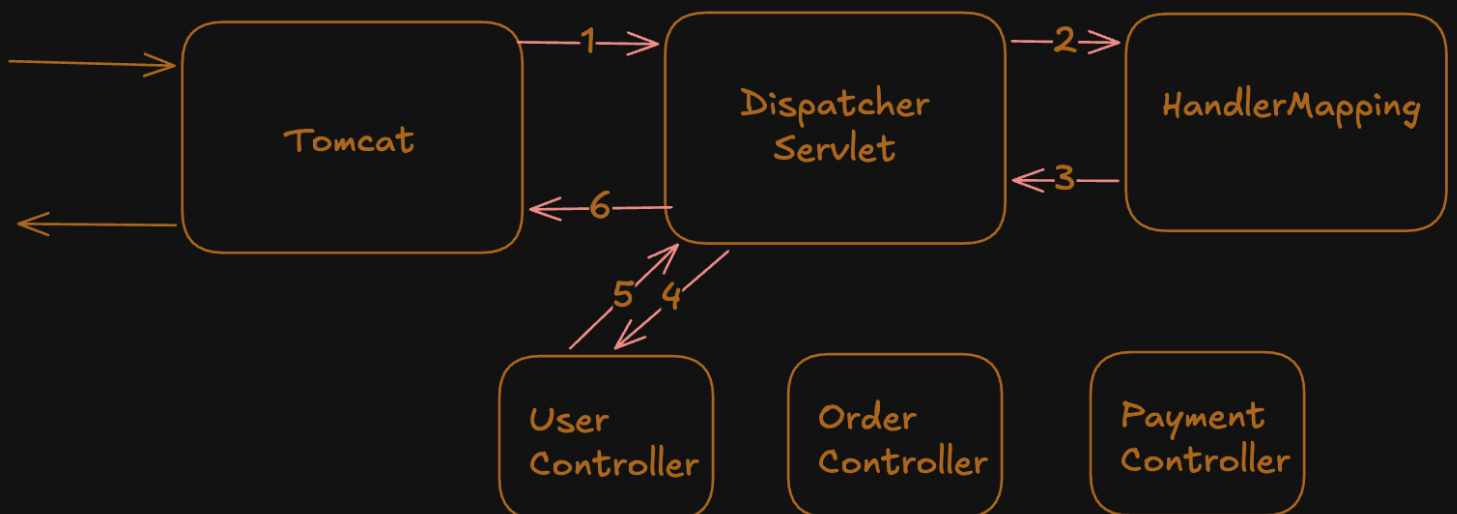

—> /users/{id}

```
{
  "id" : 1,
  "name" : "Aditya"
}
```

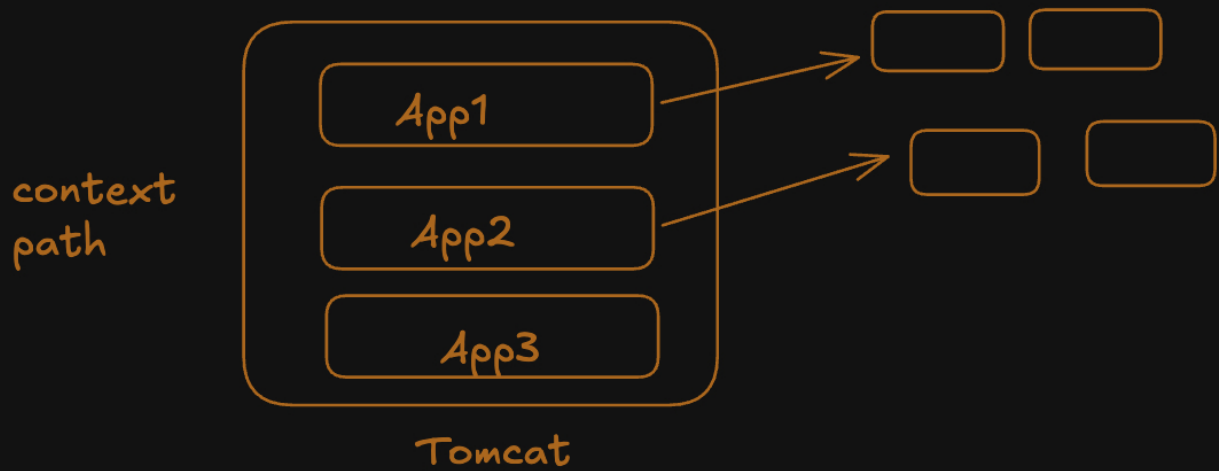

Jackson

```
class User {
    int id;
    String name;
}
```

Tomcat --> External tomcat

Embedded tomcat

Spring-boot-started-web

SPring MVC --> Rest API (JSON)

--> web APPS (HTML/JSP)

--> Viewa

M - Model

V - View (HTML/JSP)

C - Controller
